TSI Fleetmanager

Intelligent fleet management for your success

© Fotolia / styleuneed

Your advantages at a glance

- Overview of the current locations of all vehicles
- Detailed trip report and driver's logbook
- Route tracking in maps
- Fuel consumption tracking & graphical driving style analysis
- Order transmission, temperature monitoring, anti-theft protection
- ...

Complete solutions for unique needs

TSI Fleetmanager is a complete fleet management solution, which utilising latest Web technologies is scalable to any application.

Thus **TSI Fleetmanager** is equally suitable for small and medium sized companies as well as for large corporations requiring a seamless integration into the corporate enterprise resource planning (ERP) strategy.
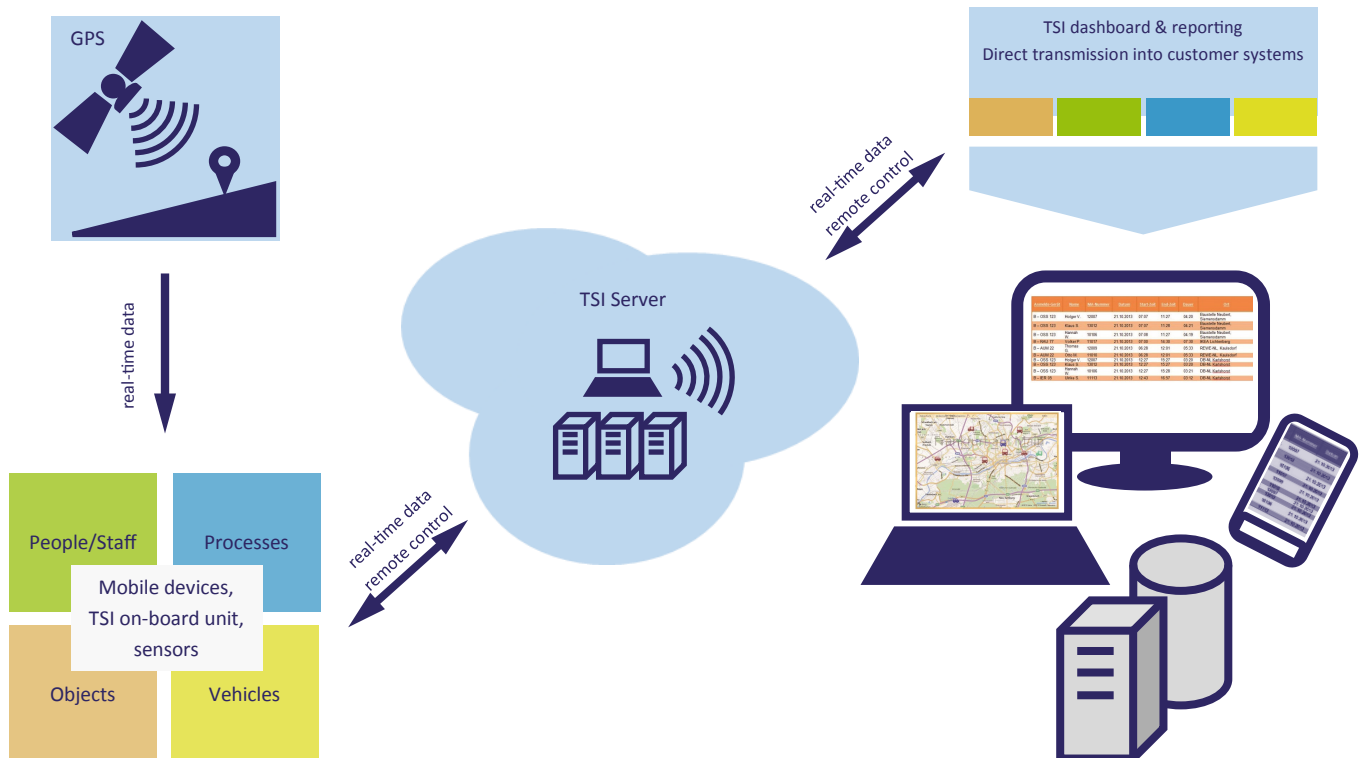

Benefit from accurate information about the state and location of your vehicles and staff. Optimize your dispatching, reduce costs, and create competitive advantages.

A multitude of reporting features, such as trip and trip detail analysis, working time recording or fuel consumption tracking and driving style analysis facilitate more efficient and timely billing and accounting.

TSI Fleetmanager is ready to use immediately i.e. for:

- Transport and taxi services, or courier services
- Construction and crafts business
- Social services
- Rental & rental equipment companies

TSI Fleetmanager

Intelligent fleet management for your success

TSI dashboard & reporting / Direct transmission into customer systems

TSI Fleetmanager provides an overview of your vehicles, accessible anytime, anywhere. With integrated, zoom-able maps you have all your vehicles in sight, can easily track your vehicles routes and dispatch live and in real-time. You also have access to numerous reports and analyses. Choose from pre-configured standard reports, analyses and graphs, or compose your own reports with parameters defined by you.

See detailed information about specific trips, define custom names for places and use the integrated driver's logbook. Visualize analyses graphically to evaluate various vehicle parameters or the driving behaviour of drivers.

With additional sensors, you can among others things e.g. completely document compliance with the cold chain or track and optimize fuel consumption.

For special events you receive alerts via SMS or email, for example, when vehicles leave a defined area or certain cooling temperatures are exceeded.

The integrated maintenance module informs you when the next inspection is due in a timely manner and provides a singular place to record all vehicle related information.

TSI Fleetmanager supports all popular formats for data export, such as Excel, PDF, HTML or CSV. Standard compliant interfaces are available for further processing in your own ERP systems.

Frequently used reports and analyses can be delivered to your email inbox automatically in at specified times and even limited access can be granted to external parties such as your customers.

### A full range of functions with absolute flexibility

Standard reports
- Overview of all vehicles
- Routes report for all trips
- Detailed driver's logbook
- Extensive trip details with all detailed waypoints
